

The English

Chapman's and Traveller's

Almanack,

For the Year of CHRIST, 1712.

Wherein all the Post-Roads, with their several Branches and Distances, the *Markets, Fairs, and Markets* in *England and Wales*, are *Alphabetically* disposed in every Month; so that the Place *where*, and the Days on which any of them are kept, is immediately found out.

To which is added,

A TABLE of ACCOUNTS

READY CAST UP,

For the Buying or Selling of any Commodity by *Number, Weight, or Measure*; from One Farthing to Ten Pounds: and of any *Quantity*, from One to Ten thousand.

W I T H

A Sun-Dial, and other Tables and Things useful for all Travellers, Traders, and Chapmen of what kind soever.

A L S O,

The rising and setting of the Sun and Moon, the Tides, the Length of Days, Increase and Decrease of the Days throughout the Year, and whatsoever else is necessary for an Annual

ALMANACK.

LONDON, Printed by E. James for the COMPANY of STATIONERS, 1712.

Which Table by Addition, Subtraction, and Multiplication of the Sums, Months and Days, will shew what is due for any other Sum of Money, for any other number of days that are herein expressed.

A Table shewing at what hour and minute the Moon cometh to the South, and also how long she shineth for every day of her age, & the several uses of the *same Table*.

In the Fifth Column of this

Almanack, you have the Age of the Moon standing against every day in the Year, by help whereof and this little *Table*, you may nearly find I. At what hour and minute the moon will be just in the South, either evening or morning.

II. How many hours and minutes she will *shine* either at night or next morning.

III. At what time the moon *rises* or *sets*.

IV. The hour of the night, by the shadow of the Moon upon any *Sun-Dial*.

I. To find at what time the Moon will be in the south.

Example Upon the 16th of

March, the Moon being then 10 days old, I would know at what time the Moon will be upon the Meridian or South.

Look in the first Column of this Table for 10, the Moons Age increasing, and right against it in the second Column, you shall find 8 hours 0 m. at which time the Moon will be just South in the evening.

II. To find how long the Moon shineth.

Example Upon the 4th of

March, the Moon that day being 6 days old, I would know how many hours and minutes she *shineth* that night.

Days of the Moons Age Increasing, from the Change to the Full.		Ho. m.		Ho. m.	
0	0	0	00	0	00
1	1	0	48	0	48
2	2	1	36	1	36
3	3	2	24	2	24
4	4	3	12	3	12
5	5	4	0	4	0
6	6	4	48	4	48
7	7	5	36	5	36
8	8	6	24	6	24
9	9	7	12	7	12
10	10	8	0	8	0
11	11	8	48	8	48
12	12	9	36	9	36
13	13	10	24	10	24
14	14	11	12	11	12
15	15	12	0	12	0

Days of the Moons Age Decreasing, from the Full to the Change.		Ho. m.		Ho. m.	
16	16	11	12	11	12
17	17	10	24	10	24
18	18	9	36	9	36
19	19	8	48	8	48
20	20	7	0	7	0
21	21	6	48	6	48
22	22	5	36	5	36
23	23	4	24	4	24
24	24	3	12	3	12
25	25	2	0	2	0
26	26	1	48	1	48
27	27	0	36	0	36
28	28	0	24	0	24
29	29	1	12	1	12
30	30	0	0	0	0

The Moon shines in the Morning.

The Moon comes to South in the morn.

Look for 6 (the *Moons* age) in the first Column of this Table, and right against it (in the third Column) you shall find 4 hours 48 min. and so long will the *Moon* *shine* that *Evening*, because the *Moon* increaseth.

III. To find at what time the *Moon* riseth and setteth.

I. If the *Moon* be increasing, that is, if she be less than 15 days old, *add* the hours and minutes of her *shining*, to the hours and minutes of the *Suns Rising*, and the sum will be the time of the *Moons Rising*. But,

2. If the *Moon* be decreasing, that is, if she be above 15 days old, *subtract* the hours and minutes of her *shining* from the hours and minutes of the *Suns Rising*, and the remainder will be the time of the *Moons Rising*.

For the *Moons* setting.

1. If the *Moon* be less than 15 days old, *add* the time of her *shining* to the time of the *Suns setting*, the sum is her *setting*. — But

2. If the *Moon* be above 15 days old, *subtract* her *shining* from the *Suns setting*, the remainder is her *setting*, adding or subtracting 12 hours if need be.

IV. To find the hour of the *Night*, by the *Moons* Shadow on a *Sun-Dial*.

Find at what time the *Moon* comes to the South as before, which known, mark how much the Shadow upon the *Dial* wants of 12; which take from the time of the *Moons* coming to the South, the remainder is the hour of the *Night*. But if the Shadow be past 12, add those hours to the coming to the South, and the Sum is the hour of the *Night*.

Example, Upon the 12th. of *April*, the *Moon* being 13 days old, and comes to the South at 10 h. 24 m. and that *Night* I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take the 2 h. and 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the *Night*. But if the Shadow had been 2 h. 30 m. after 12, those added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the *Night*.

January hath xxxi. Days.

The use of the Sun-dial.

FOR the ready finding of the Hour of the Day by this *Dial*, you must provide a Freight Staff or Ruler, which must first be divided into Ten equal parts, and then each of those into Ten other smaller parts, so will the whole Staff or Ruler be divided into 100 equal parts, which may be numbered by 10, 20, 30, &c. to 100: And so is it fitted for Use.

Now when you would find the Hour, you must erect your Staff or Ruler perpendicular, that is, let it upright upon some plain level Ground, Floor or Table, and note the place where the end of the Shadow dial fall, and with your Staff measure the length of the Shadow in Staves lengths, and hundred parts of the Length, according as it is numbered.

Example, Suppose that on the 16th day of *January* I do erect my Staff perpendicular, and measuring the length of the Shadow thereof, I find it to be exactly 3 times its length, whereof finding the 16th day at top of the Month of *January*, I find 3, 0, to stand against the 16th day, and at the top find XII, which tells me it is then just 12 a Clock, — *Example 2*, Suppose that upon the 6th of *May* I erect my Staff as before, and measuring the Shadow thereof, I find it to be twice the length of the Staff, and 24 parts more; wherefore, I look at the top of the Dial in *May*, for the 6th day, and casting my eye along that line, towards the right hand, I find 2, 24, to stand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the Morning, or 5 in the afternoon. — *Example 3*, Upon the 16th of *April*, I find the length of the shadow to be once the Staffs length and 30 parts more; I look in *April* for the 16th day in the Sun-Dial, and in the line against it for 1, 30, and against it in the fifth Column I find 1, 33 (which is the nearest number nearest to 1, 30, in the Table) over which there stands IX and III, which shews that it is almost 9 in the morning, or a little after 3 in the afternoon, — *Example 4*, Upon the 26th of *June* I find the length of the shadow of the Staff to be once the whole length, and 20 parts; if I look for this Number 1, 20, in the Sun-Dial against the 26th of *June*, I can find no such Number, but the nearest to it less in that line is 1, 01, over which stands IX, III, and the nearest number to it, greater, is 1, 38, over which stands VIII, IV, or that you may conclude the hour to be between 8 and 9 in the morning so between 3 and 4 in the afternoon. A little practice will make all this plain: For *Ufus optimus Magister*.

B *Atenans* true Spirits of *Scurvey-Grass*, both Plain and Golden, so long famous for the cure of the Scurvey, Gout, Dropsie, and other Chronical Diseases; are still prepared by *Maria Smith* in *Great-Carter-Lane*, near *Dorset--Common*. Price One Shilling each Bottle.

The Number of Pounds, Yards, Gros, or the like, to be bought or sold.

The

This Table will serve for many good purposes, but it is here principally intended for the Chapman use in Buying or Selling of any Commodity by the Yard, Ell, Pound, Hundred, Gallon, &c. And its use is very easie; as by

EXAMPLE I.

9 d. the Yard, what will 70 yards come to?
Look for 9 d. at the head of the Table, and for 70 in the fifth Row or Column of the same Table, and against 70. and under 9 d. you shall find 2 l. 12 s. 6 d. And so much will 70 Yards at 9 d. the Yard come to.

Also, At 5 d. the Gallon, 500 Gallons will come to 10 l. 8 s. 4 d.

And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it out at twice, and add them together, and the sum shall answer your Question.

EXAMPLE II.

At 7 s. the Dozen of Gloves, what will 78 dozen come to?

l. s.

70 Dozen at 7 s. comes to

24 10

8 Dozen at 7 s. comes to

2 16

The Sum

27 06

So that 78 Dozen at 7 s. the Dozen, come to 27 l. 6 s.

EXAMPLE III.

At 3 s. 5 d. 3 q. the Ell, what will 300 Ells come to?

l. s. d.

300 Ells at 3 s. comes to

45 0 0

300 Ells at 5 d. comes to

6 5 0

300 Ells at 3 q. comes to

0 18 9

The Price of 300 Ells

52 3 9

EXAMPLE IV.

At 7 d. halfpenny the Pound, what will 92 Pounds come to?

l. s. d.

90 Pound at 7 d. the Pound, comes to

2 12 6

2 Pound at 7 d. the Pound, comes to

1 2

90 Pound at a halfpenny, comes to

3 9

2 Pound at a halfpenny, comes to

1

The Price of 92 Pound, at 7 d. 2 q. 2

2 17 6
